in therapeutic, diagnostic and pharmacogenomic applications, in drug screening, clinical trial monitoring, the treatment of physiological disorder or diseases, and in codming the treatment of physiological can be used for identifying coding sequences and mapping a unique gene to prepare cloning accounting templates, to isolate clones, to prepare cloning and sequencing templates, as hybridisation probes for screening libraries and assessing gene expression patterns, in microarrays and other assay formats to screen collections of genetic incoarrays and other assay formats to screen collections of genetic identify mutations associated with a particular medical condition, to identify mutations associated with a particular disease, in a diagnostic and/or triple helix sequences that are useful for gene regulation. (I) can also be used for detecting mutant proteins or inappropriately expressed proteins for the diagnosis of disease, for screening for drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of a human semaphorin homologue in the body, and in the molecular mutagenesis/evolution of proteins that are at least partially encoded by (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABA04062 to ABA04087 represent polynucleotide sequences (I) which encode the human semaphorin homologous proteins (particularly similar to semaphorin G) given in AAG68289 to AAG68312 (II). (I) and (II) are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, semaphorin G; MHP; semaphorin homologue; therapeutic; diagnostic; pharmacogenomic; drug screening; clinical trial; physiological disease; cosmetic; nutriceutical.
                                                                                                                                                                                                                                                                                                                                             New nucleic acid molecule that encodes human semaphorin homolog, usef in therapeutic, diagnostic and pharmacogenomic applications, in drug screening and in clinical trial monitoring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0

companyor to hardrane proteins ordering statements and the human semaphorin homologous proteins organizations in the human semaphorin homologous proteins (II). (I) and (II) are useful in therapeutic, diagnostic and pharma-openomic applications, in drug screening, clinical trial monitoring, extrement of physiological disorder or diseases, and in cosmetic or nutriceutical applications. (I) can be used for identifying coding sequences and mapping a unique gene to particular chromosome, to screen libraries, to isolate clomes, to prepare cloning and sequencing templates, as hybridisation probes for screening libraries and assessing gene expression patterns, in microarrays and other assay formats to screen collections of genetic material from patients who have a particular medical condition, to identify mutations associated with a particular disease, in a diagnostic or prognostic assay, as antisense molecule, and as part of ribozyme and/or triple helix sequences that are useful for gene regulation. (I) can also be used for detecting mutant proteins or inappropriately
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                can also be used for detecting mutant proteins or inappropriately expressed proteins for the diagnosis of disease, for screening for drugs effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of a human semaphorin homologue in the body, and in the molecular mutagenesis/evolution of proteins that are at least partially encoded by (1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABA04062 to ABA04087 represent polynucleotide sequences (I) which encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid molecule that encodes human semaphorin homolog, usef in therapeutic, diagnostic and pharmacogenomic applications, in drug screening and in clinical trial monitoring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, PRO polypeptide, membrane bound protein, receptor; diagnosis; transmembrane; secretion; immunoadhesion; pharmaceutical; screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Se+02;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      in therapeutic, diagnostic and pharmacogenomic applications, in drug screening, clinical trial monitoring, the treatment of physiological disorder or diseases, and in cosmetic or untriceutical applications. (I) can be used for identifying coding sequences and mapping a unique gene to a particular chromosome, to screen libraries, to isolate clones, to prepare cloning and sequencing templates, as hybridisation probes for screening libraries and assessing gene expression patterns, in microarrays and other assay formats to screen collections of genetic material from patients who have a particular medical condition, to identify mutations associated with a particular disease, in a diagnostic or prognostic assay, as antisense molecule, and as part of ribozyme and/or triple helix sequences that are useful for gene regulation. (I) can also be used for detecting mutant proteins or inappropriately
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expressed proteins for the diagnosis of disease, for screening for drugs effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of a human semaphorin homologue in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABA04062 to ABA04087 represent polynucleotide sequences (I) which encode the human semaphorin homologous proteins (particularly similar to semaphorin G) given in AAG68289 to AAG68312 (II). (I) and (II) are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          perturbing the normal function of a human semaphorin homologue in the body, and in the molecular mutagenesis/evolution of proteins that are at least partially encoded by (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              semaphorin G; NHP; semaphorin homologue; therapeutic; diagnostic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pharmacogenomic; drug screening; clinical trial; physiological disorder; physiological disease; cosmetic; nutriceutical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid molecule that encodes human semaphorin homolog, useful in therapeutic, diagnostic and pharmacogenomic applications, in drug screening and in clinical trial monitoring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to secreted and transmembrane proteins. Hese proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therappeutically useful reagents. The nucleic acids may also be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hillan KJ;
Watanabe CK;
receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful as hybridization probes, in chromosome and gene mapping and gene
                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            07-MAY-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  05-JUN-1998
   ************************
                                                                                                                                                                                                                                                                          Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.

The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the amimal. Mammals include dogs, cats, catle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TMF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also proteins can be used to determine the presence of tumours and also breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                       Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumors, such as prostate and breast tumors, in mammals and to screen for modulators of the compounds.
